

NO₂ Diffusion Tube Data

Table A1 below presents monthly mean NO₂ concentrations as measured at the 42 diffusion tube monitoring sites in 2012. The presented data have not been bias adjusted or 'annualised'. Due to low data capture (<75 per cent) apparent at each monitoring site for the 2012 calendar year, the measured mean NO₂ concentrations were adjusted to estimate an annual mean concentration ('annualised') using the methodology outlined in Box 3.2 of LAQM.TG(09). **Table A2** presents the estimation of annual mean concentrations from short-term monitoring data.

Table A1: Measured Monthly Mean NO₂ Diffusion Tube Data 2012
